

1. Insert the SD card that has been written to the image into the card slot of the board

2. Plug in the power supply and connect the HDMI cable to the monitor.

3. Please use the official 19V 2.37A round head DC interface power supply to power the NX board.

!!!Note: The official power supply didn't have switch.
It starts up when it is powered on. You can see that the DS1 indicator on Jetson Xavier NX, waiting for the system to enter the desktop.
